URGES IMPROVEMENT OF CITY'S SANITARY AND HEALTH SYSTEM

Able and Powerful Addresses
Made by Physicians at Joint
Meeting of Merchants' Association and Chamber of Commerce

Asking the support of the commercial and business men of Honolulu in urging legislation to perfect the health and sanitation system in this city and throughout the Territory, able addresses were delivered at a special meeting of the Merchants' Association and the Chamber of Commerce yesterday afternoon by Dr. J. S. B. Pratt, president of the board of health; Dr. F. B. Trotter, chief quarantine surgeon, and Dr. E. R. Marshall of the U. S. public health and marine hospital service.

Dr. Pratt gave a general review of the health situation, of the changes that should be made for its betterment, and explained his reasons in full. Dr. Trotter, discussing the plague rat problem, urged that rat-proofing the city for a mile in radius from the port in every direction, while Dr. Marshall told of the mosquito campaign and of the necessity for its maintenance.

Dr. Trotter urged that San Francisco's example, in rat-proofing all harbors, be followed, and in answer to a question from President E. F. Bishop of the Chamber of Commerce, he said the only reason that Honolulu has not already suffered from a severe attack of the plague carried by the rats is that the rodents here thus far do not appear to be infected. The health board is constantly killing the animals, but at present an infected rat is found rarely. Should a few infected animals from Shanghai or another infested Oriental port escape from ships at this port, the contagion, dread malady, would quickly spread throughout this and the other islands, because the rodent is a marvellous traveler.

Pointing his reason for urging the maintenance of the mosquito campaign, Dr. Marshall cited the case of the island of Mauritius, once regarded as an ideal health spot but now a ruinous death trap, made so by the appearance of the anopheles mosquito. He also told of an island in the Mediterranean, now the favorite resort of the elite, where the favorite sport, which was once sold for \$10,000 because it had a death rate of nine for every ten persons. The government finally took a hand however, instituted an anti-mosquito campaign and modern sanitation and quickly cleaned up the malarial pest. Recently the present owner refused \$50,000 for it.

Praising the efficacy of the mosquito work in Honolulu he said that yellow fever patients might be brought into the city with little fear of starting an epidemic, because there was so little danger from the germ-carrying insect, due to its absence. But if the mosquito were to get a footing here, he stated, it would be worse than the plague, yellow fever or any other disease that could be introduced.

New sanitation laws which the legislature will be asked to pass were outlined by Dr. Pratt in his address, given in part below:

"Many people think that the board of health has all the powers necessary and as regards their general powers, that is probably true, but there are certain powers which should be given specifically so that there can be no misunderstanding.

Needs More Jurisdiction
"There are also certain matters over which the board of health does not have jurisdiction but which are vital to the health of the community.

"Water and sewer systems are under the jurisdiction of the different counties and this is all right but the board of health should also have some jurisdiction. By this jurisdiction is not meant the construction of water or sewer systems but the power to say, after investigation, whether or not a certain water supply for example is pure enough for the public to use or what localities are most in need of a sewer system. It would also give the power to the board over other water supplies which may not be under the control of counties.

"Why does the board of health wish this power? Many reasons may be given but I will only mention a few. Pure water is as essential to health as pure food or pure air. By having this power the board of health would be able to prevent the use of polluted water, could see that a proper method of distribution was installed, could safe-guard the source and watershed, could have purification plants installed where necessary, would be better able to protect the community against water borne diseases, prevent the pollution of streams with sewage and by means of its knowledge of the various districts would be able to advise where sewers are needed. Also, where, by reason of overflowing cesspools, privy vaults or inadequate sewerage systems the public health was endangered they would have power to remedy the same.

Protect the Fish
"A number of years ago the mosquito fish or top minnow were brought here at considerable expense. During the past few years, fishermen have been seining the small ponds and streams to get these fish to use as bait.

"The board of health has had to restock a number of streams and if this seining is permitted to go on it will in time lead to the extermination of these most useful fish. A law to protect these fish is needed.

"A law regulating the labor of women and children is, it is believed, necessary in this territory. Such a law would not mean that child labor would be prohibited but it would be safeguarded so as to protect the health of the children. A law along the lines of those enacted for Massachusetts and New York and adapted

to the conditions of this territory is what is desired. If we are to have healthy and robust citizens their health must be guarded while they are young and in the stage of development.

"The legislature of 1911 passed a law requiring that when a tract of land is opened up or subdivided it is necessary to file a plan thereof with the registrar of conveyances. We should have another law which provide that when new tracts are opened for residence purposes, water pipes shall be laid, a pure water supply and an adequate sewerage system or other means of sewage disposal, and until this is done the lots may not be put on the market. This would have the effect of preventing the opening up of undesirable sections, the whole system would be put in at one time thereby reducing the cost to the individual buyer and proper means of sewage disposal would be provided before the buildings are occupied.

"Today Honolulu has spread here, there and everywhere. Our expense of maintenance is enormous, due to the fact that a section here or there wherever the agent owned a small tract of land, has been opened up. If some change is not made, our maintenance will creep higher and higher and it is necessary to make new tracts fit in with the city and assist in the general growth. Miles and miles of water pipe are in Honolulu streets today, altogether too small, friction losses and leakage enormous, all because they were put in for the individual rather than for the future of the community.

Amend Law.
"The sanitary and law of the last legislature needs to be amended so as to apply to Government lands as well as private. It has happened in the past two years that some insanitary land condemned by the board a portion belonged to the government. It does not look just to make owners ill land and allow the government to stand by and not do their part.

"The board of health needs a revolving fund of about \$25,000.00 so that the law in regard to the abatement of nuisances may become operative.

"As the law stands at present, the board is empowered in case parties do not abate a nuisance to abate it themselves but it is inoperative because the board has no funds with which to do it. A law without a penalty or means of enforcing the penalty is not of much force.

"Today upon refusal to abate a nuisance a criminal prosecution is possible but the board of health is more desirous of eradicating the trouble than carrying on prosecutions. Sanitary Court.

"To facilitate the handling of insanitary conditions a sanitary court is thought advisable. This court to be composed of five members trained in sanitary matters. Hearing would first be before the board of health on appeal from the order of the sanitary inspector or agent of the board, if decided by them that it is a nuisance and should be abated, a further appeal may be taken by the party to the sanitary court and their decision should be final.

"The reasons for such a court may be briefly stated. Men trained as sanitarians will readily recognize many self-evident reasons which to a man who had not made a study of the subject would appear as no cause for action. Police magistrates are chosen for their knowledge of law, their familiarity with evidence, and their knowledge of the causes of crime. To be a sanitary is a crime, it is true, but it is a crime against each and every individual in the state, and jeopardizes their health. Therefore unsanitary criminals should be tried before judges who are trained in sanitary matters and laws.

"The laws of many states relating to health matters are in the sanitary code; in others they are like the specifications for a building forming the working basis of laws. Many of the present rules and regulations of the board are dead letters and others are out of date.

"It is suggested that a commission of two lawyers and a sanitarian be created to draw up a sanitary code for the territory using the present regulations as a basis. As soon as completed this code to have the force and effect of law after approval by the governor and publication replacing present regulations until the next regular session of the legislature, when they could be adopted by this body. New York City, Texas, Utah and Louisiana have such codes. The reason for such a code is so self-evident that it does not require any explanation.

Asks Civil Service.
"One of the most important, if not most important, measures desired is a civil service law to apply to all appointees of the board of health. It takes years to train a man so that he is an efficient sanitary officer and just as often as we are changed, just so great will be the loss of efficient service.

"A civil service law will enable the board to obtain men who had some ability towards making an efficient inspector. It would be efficiency of service, and elimination of politics. A man would feel that faithful performance of duties would be recognized and he would not have to be under any political boss or have party affiliations to hold his job and the public would therefore be better served.

Need of Drug Laws.
"During the past few years, several persons have died from the use of poisonous drugs sold by parties who had a license to sell drugs but were ignorant of the dangerous character of the drugs they were selling. The law at present on the statute books is antiquated and loosely drawn. The law should be drafted so as to prevent the sale of poisonous drugs to

Cannot Go to School Like Other Girls

The girl with thin blood starts life under too great a handicap. She is more frail and weak than her companions who have rich, red blood. She is more easily fatigued in mind and body than they are. School work is too great a strain for her. In the effort to keep up, her health breaks down. She becomes deathly pale, looks worn out, is frail, languid, irritable, over-sensitive and nervous. She cannot keep her mind on her work and takes no interest in things about her. Her heart palpitates and she is short of breath and faint upon the least exertion. She has to stay out of school. Her growth is delayed and she falls behind the girls of her age in looks, health and education.

An abundance of rich, red blood is the only thing that will restore such a girl to health. Give her Dr. Williams' Pink Pills to make her blood pure and healthy. They will build up and cleanse the blood as no other medicine can. They are a specific for bloodlessness and cure where other less efficient medicines fail. With Dr. Williams' Pink Pills you can give your daughter the health and happiness that go with good blood. Healthy blood means a good appetite, a good digestion, strong nerves, a clear brain and lifelong growth.

These pills are also good for rheumatism, indigestion and nervousness. Our booklet, "Building Up the Blood," is free on request. Your druggist sells Dr. Williams' Pink Pills at 50 cents per box or \$2.50 for six boxes or they will be sent by mail, postpaid, upon receipt of price by the Dr. Williams' Medicine Co., Schenectady, N. Y.

WHEN A LAXATIVE IS NEEDED—"CASCARETS"

Salts, Calomel and Cathartic Pills are violent—they act on bowels as pepper acts in nostrils.

Take a Cascaret tonight and thoroughly cleanse your Liver, Stomach and Bowels, and you will surely feel great by morning. You men and women who have headache, coated tongue, can't sleep, are bilious, nervous and upset, bothered with a sick, gassy, disordered stomach, or have backache and feel all worn out.

Are you keeping your bowels clean with Cascarets—or merely forcing a passageway every few days with salts, cathartic pills or castor oil? This is important.

Cascarets immediately cleanse and regulate the stomach, remove the sour, undigested and fermenting food and foul gases; take the excess bile from the liver and carry off the constipated waste matter and poison from the intestines and bowels.

Remember, a Cascaret tonight will straighten you out by morning. A 10-cent box from your druggist means healthy bowel action, a clear head and cheerfulness for months. Don't forget the children.—advertisement.

Incompetent parties and also to prevent the sale of poisonous drugs except by those who know their dangerous nature.

"A matter which has already been brought to your attention through the trips made by a number of your members should be brought to the attention of the legislature and a law covering the conditions passed at this coming session.

"This is the matter of sanitary streets and the abolishing of wet farming in the city of Honolulu.

"If we are to get our house in order and remove the dangers from water-borne diseases, such as cholera or typhoid, we must have more streets to which lay sewers and water pipes and do away with our taro patches and awails. There are several amendments to existing laws of a somewhat minor importance and I will not take up your time with them as I desire to say a few words in regard to appropriations.

"A careful estimate of the needs of the board of health for the coming two years has been submitted to the governor and will later be submitted to the legislature with his recommendations.

"Another matter which has been borne in mind is the opening of the Panama canal with increased shipping and the more intimate relations we are having yearly with South American ports. The main items upon which I ask your support are the ones for a larger and more effective sanitary force, a liberal allowance for tuberculosis work, a fund for establishing a bureau of child hygiene.

Sanitary Engineer.
"The Territory is growing so that we need a larger force in the sanitation bureau of the board. There are also many engineering problems coming up and there is need of a paid sanitary engineer who can take up the water and sewerage problems from the health standpoint.

"In regard to tuberculosis you are all so familiar with this subject that it is hardly necessary to dwell long upon it. We have made considerable headway in the past two years fighting this disease and now is the opportune time to strike our hardest blow against the white plague."

Spiritual strength, like mental muscle and corporeal culture, requires exercise.
